

Join the Wonder League Robotics Competition

Robots, coding, teamwork, fun!

Coding is the new team sport for future tech leaders and innovators! Starting in September, children, in teams of up to five, will design real-world science and technology solutions to collaborative problem-solving challenges for Dash, Dot & Cue robots. Teams will develop critical thinking and creativity skills, learn about issues facing the world around them, and build meaningful relationships with their peers. Open to ages 6-14. No experience needed!
